Air is without
substance:
a free spirit.
At Faber we can
weigh it,
measure it,
adapt it and
shape it like
solid matter.
Air has been
our substance for
more than
60 years.
Air technology is
the reason
we work.
We are confident
about our
achievements
because we know
how to handle it.

Faber is characterised by a pioneering spirit. We are the Company who created the cookerhood. We draw on our experience as “an explorer” pushing forward the frontiers of research and innovation.

The spirit of Faber is to constantly look for the most advanced solutions. As specialists, we provide the industry with a wide and deep range and have a single goal single target: to improve the quality of air.

**Pioneering
spirit.**

We invented the kitchen hood in a small workshop. For decades we have created, designed and manufactured hoods, becoming a global leader in the industry with regards to both production and technology. For this reason, in Italy, one hood out of two is a Faber hood.

The technologies that make FABER hoods more effective and easy to use

UP & DOWN

It offers maximum comfort and practicality in the kitchen: operated by remote control the hood gently lowers onto the hob increasing its efficiency.

DOUBLE ASPIRATION

Double extraction is derived from the overlapping of two glasses in vertical hoods, ensuring greater hood effectiveness.

ENERGY DIFFUSER

Energy Diffuser: it reduces noise up to 3dB(A) and higher hood efficiency by 30% even in the presence of long air outlet.

EVO DIFFUSER

The Energy diffuser has evolved with an optimised geometry that yields excellent results in terms of energy efficiency, reduced power consumption and noise level thanks to in-depth fluid dynamics studies.

Energy saving technologies

The new Faber diffuser enables a leap in energy quality from Class C to Class A*.

It also provides high performance with low power consumption, due to its optimised geometry and the fluid dynamic analysis of the impeller.

* for built-in hoods

BRUSHLESS

The brushless motor guarantees considerable energy saving coupled with high extraction efficacy. It is the most silent motor on the market and its performance remains stable in any usage condition.

NAUTILUS

Technologies that make FABER hoods quieter

REMOTE BLOWER

The ability to install the motor away from the hood frees it from architectural constraints and reduces noise in the kitchen.

PERIMETER ASPIRATION

Reduces the perceived sound by 25% (*). This aspiration guarantees optimised effectiveness exploiting the principle of the Venturi effect: air accelerates as it passes through the constricted extraction space of the panel and then decreases immediately inside the hood and is then easily expelled without need for any particular pressure. (*) Equal to a reduction of 3dB(A) according to norm EN 60704-3

SILENT KIT

Reduces the perceived sound by up to 25%. (*) Washable sound-absorbing cushions which soundproof the hood. (*) Equal to a reduction of 3dB(A) according to norm EN 60704-3

Technologies that make FABER hoods more functional

SPEED I

Intensive speed: function which activates maximum aspiration for 6 minutes to meet special cooking needs.

DELAY 30

Delayed switch-off: allows automatic delayed switching off of the motor to complete elimination of residual odours.

HOUR 24

Key 24: function which allows the hood to be switched on for 24 hours a day for continuous air renewal with a level of noise that is imperceptible.

FILTER ALARM

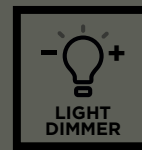

Filter saturation alarm: warns you when it is time to clean the anti-grease filter or substitute the anti-odour filter.

COMFORT LIGHT

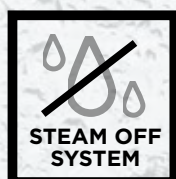

Courtesy light: reduced hood light intensity with the simple press of a button. Thanks to its low level of energy consumption, the courtesy light can be left on for long periods of time.

LIGHT DIMMER

Dimmer light: adjusts hood courtesy light with the simple press of a button to meet all your kitchen needs.

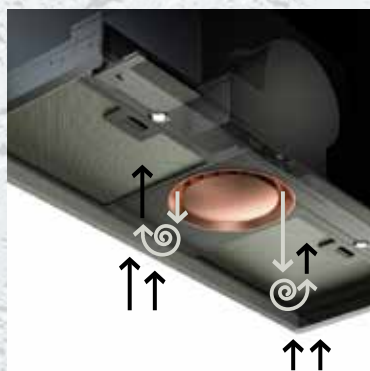

EXCLUSIVE, CONDENSATION-FREE COMFORT

In induction hobs, the thermal differential created between the hot part adjacent to the cooking top and the cooler air under the extractor side of the hood causes condensation and dripping that no one had yet managed to solve.

Steam dispersion also tends to involve the surrounding environment and the structural elements of the kitchen, such as the doors and bases of the wall units.

All this is eliminated with the Steam Off System.

A HOOD THAT “BREATHES”

Controlled air jets released in a helical shape and with variable geometry create two vortices that control the rise of smoke and steam. With Steam Off System, therefore, the hood not only sucks in but also emits air jets that create a vortical motion and acceleration and help to convey and capture the steam.

This puts an end to condensation and its depositing under and around the hood!

Where to find SOS

No more condensation

STEAM OFF SYSTEM - SOS:
DOUBLE AIR ACTION TO COMPLETELY
ELIMINATE CONDENSATION.
A FABER EXCLUSIVE.

THE PURSUIT OF ENERGY EXCELLENCE

Nautilus is the latest innovative diffuser by Faber. It represents a quantum leap over previous models - from energy label class C to A. It offers very high performance combined with exceptionally low power consumption.

NATURALLY INNOVATIVE

An extensive study of fluid dynamics has resulted in the optimised geometry of the impeller, which hinders the flow of air as little as possible. Close observation of nature inspired the design of the impeller, which derives from the golden section of the nautilus mollusc.

Its reduced thickness represents another unique advantage. In the world of hoods, this represents the same epochal turning point as the transition from CRT TV to the ultra-flat LCD TV!

Where to find UP&DOWN technology

LESS CONSUMPTION MORE PERFORMANCE

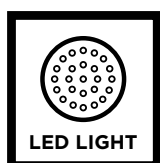

The brushless motor guarantees considerable energy saving coupled with high extraction efficacy:

- -85% power consumption (kW/h) at medium-low speeds that are most often used
- -35% consumption (kW/h) at high speeds

It is the most silent motor on the market and its performance remains stable in any usage condition.

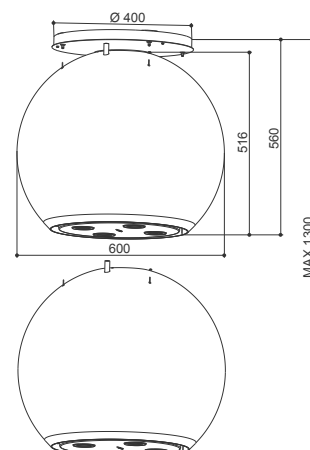

LESS CONSUMPTION MORE BRIGHTNESS

This technology offers pleasant natural lighting and faithfully reproduces the colour of the illuminated items. The LEDlight integrate perfectly with the cooker hood, for an extremely neat appearance offering all the advantages of intense light. The LEDlight was designed to optimise light distribution within the room and to achieve the correct degree of visibility over the entire worktop, with a low level of energy consumption, just 2W.

ISLAND

Island workstations provide a focal point in the kitchen. The selection of a beautiful Faber Island hood will both enhance this space and provide effective extraction in your cooking area.

EXCLUSIVE, CONDENSATION-FREE COMFORT

With Steam Off System, the exclusive Faber technology, the hood not only sucks in but also emits air jets that create a vortical motion and acceleration and help to convey and capture the steam. This puts an end to condensation and its depositing under and around the hood! DOUBLE AIR ACTION TO COMPLETELY ELIMINATE CONDENSATION.

INTEGRATED HOODS

Discreet, rational, silent.
Built-in hoods reduce the
aesthetic impact of the
hood in the kitchen and
integrate perfectly with
the cupboards.
An essential tool that's
invisible to the eye.

**EXCLUSIVE, CONDENSATION-FREE COMFORT**

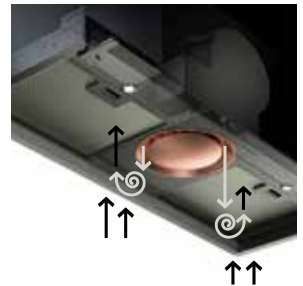

With Steam Off System, the exclusive Faber technology, the hood not only sucks in but also emits air jets that create a vortical motion and acceleration and help to convey and capture the steam. This puts an end to condensation and its depositing under and around the hood!

DOUBLE AIR ACTION TO COMPLETELY ELIMINATE CONDENSATION.

FOR EASY USE IN THE KITCHEN

Faber technology has evolved and now has an innovative new feature. You can now select a hob that can be connected with over 40 Faber hoods. Three models have been designed to be connected with your Faber appliance - an extra in the kitchen, saving you time and effort. The hob is also able to control the hood.

The hob also integrates the controls of the hood

EXTERNAL MOTOR HOODS

The Faber Collection
is now enhanced by a
complete range of
hoods with external
motors in ceiling,
downdraft, integrated,
wall and island models.

Why choose a cooker hood with an External MOTOR:

- To eliminate the noise from the cooker hood within the home.
- Allows the motor to be located completely outside of the home.

CHOOSE THE RIGHT HOOD

The necessary extraction capacity is determined by the volume of the kitchen. An effective hood changes the air of the kitchen 10 times per hour. A powerful motor is quieter and uses less energy because it is effective at low speeds.
-A hood does not create noise disturbance if its capacity is sufficient without exceeding 55 dB(A) of sound power.
-A powerful motor can be efficient even at lower, quieter speeds.
1 Fan Handbook - F. Bleier 1998

Example: A 15 m² kitchen which is 3 m tall requires a hood which aspirates at least 450 m³/h. Infact: 15 m² x 3 m x 10 = 450 m³/h
Now consult the performance table found in the product catalogue.
The hood is efficient if an equal or higher capacity value is found in one of the speed columns.

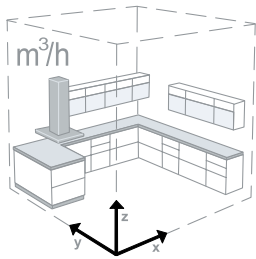

EFFECTIVENESS = kitchen m' x kitchen height x 10 changes of air

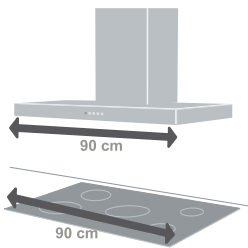

Speed	1	2	3	4	INT
Air capacity IEC point	110	195	260	313	430
Pressure	-	-	-	-	-
Input	30	45	55	70	100
Noise level	48	53	58	62	69

INSTALLATION

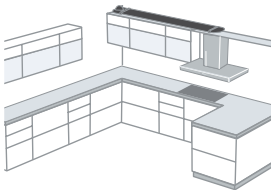

Proper installation begins with an inspection. When choosing a hood, you should know:

Kitchen volume (which determines the necessary aspiration capacity).
See section "Choosing the right hood."

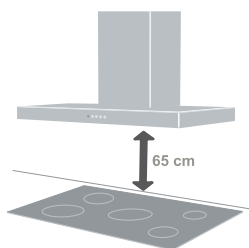

Length of the cooking top (the hood is generally as long as the cooking top area).

The position and distance of the exit hole (very long and very curved right-angled tubes limit hood efficiency).

Installation distance

The hood is to be installed at a minimum distance of 65 cm from the cooking top, except for particular models where is specified in the technical drawing and instructions manual.
ATTENTION: the product guarantee will not be considered valid if this distance is not respected.

The hood may not reach declared performance levels if the distance from the cooking top exceeds 75 cm.

Some vertical-installation models (ex. Mirror, Matrix) are to be installed lower. Check the product's technical manual.

Inspection

1 - Turn on the motor

2 - Switch on the lights

If the hood is an extraction hood, verify that it is properly connected to the exit tubing.

If the hood is a filtering hood, verify that the charcoal filters have been inserted.

First cleaning

- Remove the protective films

- Remove impurities with a damp sponge and a small amount of neutral soap

- Rinse with a damp cloth

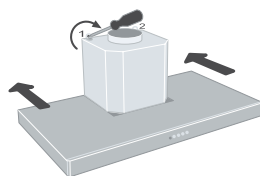

- Dry with a soft cloth. If the hood is in stainless steel, continue with

a steel glaze

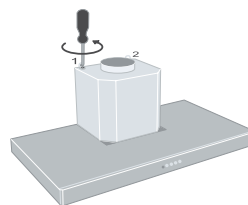

- You can give stainless steel hoods a protective treatment with the Faber Clin&Clin tissue

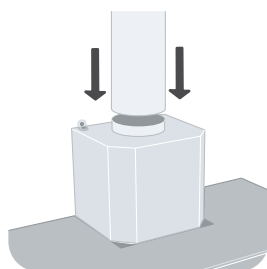

Faber hoods are easy to install because they have EASY CUBE:

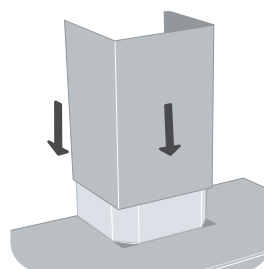

Hang the hood

Align

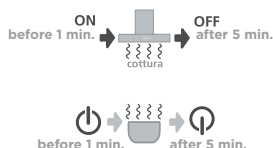

Connect tubing

Insert the chimney

USE AND MAINTENANCE

Switch on the hood a minute before cooking begins to create air flow that channels fumes and steam toward the aspiration surfaces.

If necessary, leave the hood switched on even after cooking is finished so that all steam and odours can be properly aspirated.

- Wash the metal anti-grease filters by hand or in the dishwasher every two months¹
 - Replace synthetic anti-grease filters every two months
 - Regular filter maintenance guarantees efficient hood use
- ATTENTION:** grease deposited on the filters is inflammable: be sure to perform regular maintenance

¹ These intervals of time refer to a regular use of the hood, approximately 3 hours per day

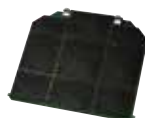

Hood cleaning

- Remove impurities with a damp sponge and a small amount of neutral soap²
- Rinse with a damp cloth
- Dry with a soft cloth, if the hood is in stainless steel, follow the steel brushing
- Clean the internal hood conduit once a year

² Acid-based cleaning products can damage hood surfaces

ANTI-ODOURS FILTERS

Long lasting filter

3
YEARS

Faber has developed a new, re-usable active carbon filter. Thanks to the multi-layer technology, the Long Lasting filter further increases filtration efficiency, with the double layer using an initial pre-filtration to capture the largest particles, and a second, more concentrated filtration to guarantee optimal air cleanliness.

The filter can be washed in the dishwasher every 3-4 months¹, for a maximum of 3 years and dries at room temperature in a vertical position to allow the water to drain out. Alternatively, it can be placed in an oven at 50°C.

¹ Normal use cooker hood, by around 3 hours per day

High performance

6
MONTHS

High-efficiency filter with a highly-concentrated carbon micro-granular structure that can guarantee more than 80% filtration capacity of intake fumes and a duration of up to 6 months, double that of a normal charcoal filter, making for economic savings of more than 20%.

CLIN & CLIN CLEANING LINE

Clin&Clin revitalising paste

Removes marks, spots and small rust stains caused by daily use, restoring a natural shine to steel surfaces.

Clin&Clin protective tissues

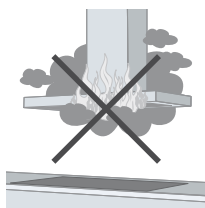

Protect and maintain the beauty of steel surfaces over time. Practical and disposable. To be applied on clean, dry surfaces.

QUALITY AND SAFETY

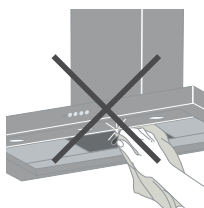

Faber hoods benefit from 60 years of competence in the treatment of kitchen air

- We were the first in the kitchen hood sector to obtain an ISO 9001 company quality system certificate.
- System integrated with Quality, Safety and Environment certified by SGS respecting the ISO 9001:2000, OHSAS 18001 and ISO 14001 norms.
- We have received the SGS Excellence Certificate, the absolute first in the world, number 001.
- All Faber hoods conform to European safety standards (EC mark of conformity), and have also been certified by the IMQ, a reliable, independent organisation further guaranteeing clients on quality (IMQ mark of security).

FABER HOODS ARE DESIGNED FOR SAFETY

Hammered internal edges and tempered glass to avoid risks of cutting.

Thermo-protected motors and self-extinguishing plastics help avoid any risk of fire.
Electronics are solid state, cables and connections are all placed correctly to avoid electric shock or dangerous sparks.

All Faber hoods have undergone safety and performance tests.

Aspiration and noise capacity have been measured according to standard norms:

- EN 61591

- EN 60704-3

unique specifications for surveying kitchen hood performance.

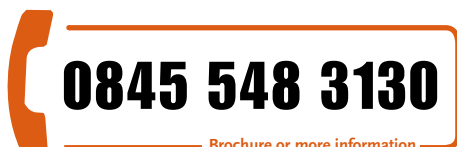

ATTENTION: Comparisons between different brand hoods should be carried out on complete data obtained according to these standards.

The Faber laboratory is NEMKO and IMQ certified.

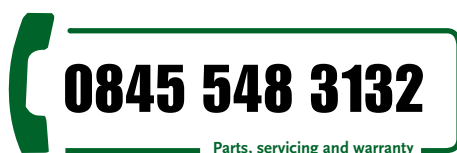

ASSISTANCE

All Faber products are sold with a 2-year guarantee, covering parts and labour. Defects caused by incorrect installation are not covered by the warranty.
